

The SMART DMS/MS Solution!

Supply Chain Data Centric Software Solution for Supportability and Obsolescence Management

Key Features & Benefits:

- With information, analyses & solutions, SMART is the only “One Stop Shop” for your DMS/MS needs.
- Embedded data content with over 20 million parts and real time visibility of available aftermarket asset inventory & suppliers, directly helps you manage supply support and logistics information.
- Disparate data is brought to life in the information portal. A proactive alert notification process within SMART shows SCORE ranking & prioritization.
- Decision support in a closed loop process provides solution based case management along with cost avoidance analyses & metrics. Automatic Return on investment (ROI) is built-in providing justification of budget and program expenditures.
- SMART is a low cost and easy to use deployment model. With unlimited users and no per seat cost, this web based supply chain collaborative application has tight security and control features, yet is user friendly & intuitive.

Your Full Scale DMS/MS Decision Support Solution within an Open Architecture and Web Based Collaborative Environment

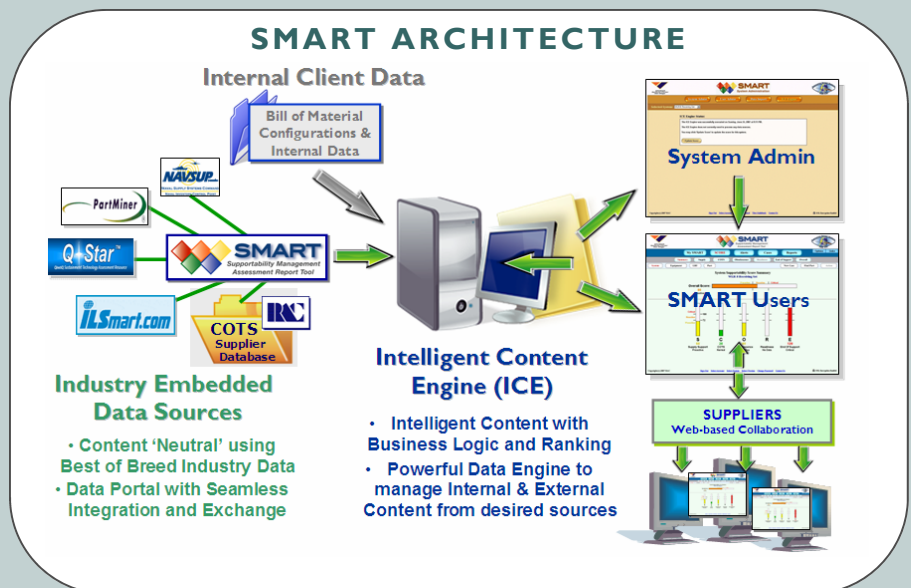

At Resource Analysis Corporation (RAC), our focus is to provide you with a single solution that saves time, money and resources. SMART is a web-based, state of the art turn-key software that provides you with information, analyses and solutions. With SMART, you have increased productivity with optimized solution options.

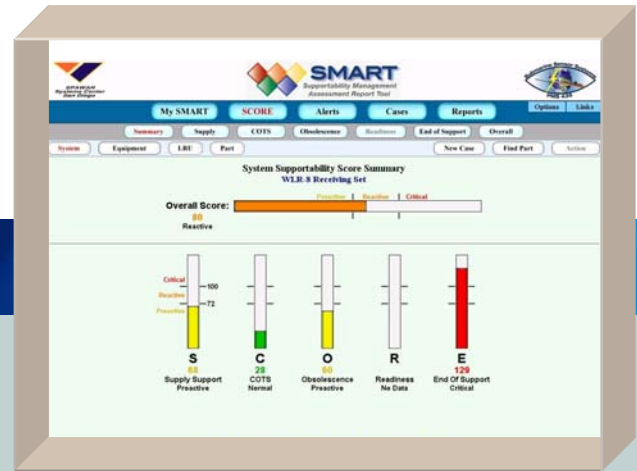

You're A Click Away from Decision Support Solutions

SMART takes DMS/MS management to a new level by incorporating the key ingredients required for program supportability management. Complete life cycle management and software processes have been encompassed within SMART to meet your specific program requirements with Form, Fit and Function (FFF) options.

Unique data model and reporting set SMART apart. With the Intelligent Content Engine (ICE), industry data is embedded and automatically updated. SMART's data centric design empowers information and data outputs and easily integrates with existing tools and data sources. With SMART, you have visibility and priority control for all internal and external data sources. RAC can even provide you with custom data integration and software development options.

SCORE FACTORS

SCORE - Unique Methods Analyzing Key Functional Areas Across Multiple Disciplines

S SUPPLY SUPPORT	C COTS AVAILABILITY	O OBSOLESCENCE IMPACT	R READINESS DRIVERS	E END OF SUPPORT
Inventory & Assets: On-Hand, Sponsor Owned, Repairable, Serviceable and Other	COTS Manufacturer Availability Status with End of Life Timeline	Parts Procurability with Detailed FFF Alternates and Lifecycle Projections	Repair Rates, Failure Rates, MTBF, MTTR	End of Support Impact Date with Projections & Forecasting
Demand and Lead Time: Usage, Reorder Point, Depletion Date & Other	COTS Replacements with Form, Fit & Function (FFF) Ratings	Active, Passive, Connectors & Board Level Rollup Analysis	Reliability, Repair and Readiness Data to Analyze Criticality	Obsolescence, Asset Consumption, Repair Rates, etc.
